

KENNETH “SCOTT” SHIPMAN

727-366-8210 | k.scott.shipman@gmail.com

Summary

Director of Software Engineering experienced in large-scale SaaS full lifecycle product development, using cloud-native architecture (AWS, GCP), while managing distributed teams, following coding, testing, security and architectural best practices.

As a player-coach, I am hands on, an emotionally intelligent mentor to Engineering, Testing and DevOps resources, fostering productive, innovative cultures of satisfaction.

Successes have included launching and supporting custom Video Conference platforms, Event management platforms, marketing funnels and lead management (CRM), Scheduling tools, shopping experiences with full PCI compliant payment systems, Learning Management Systems, Logistics and Product availability tools, and AI driven automations and analysis tools, compliant with HIPAA, PCI, PII, GDPR and OWASP.

Certifications

- Certified Scrum Master: Scrum Alliance
- Certified Cloud Practitioner: AWS

Professional Experience

Pompa Program

Jan 2024 - Present

Head of Engineering

- Leading large-scale cloud-native SaaS development for innovative platform solutions, overseeing distributed engineering resources and ensuring high-quality releases, with services including order management and fulfillment, scheduling, lead and sales flow management, marketing tech, and twilio back telephony (SMS/phone).
- Developing architectural standards and processes for scalable and resilient applications, API's and micro-services, leveraging AWS, Docker, and microservice patterns
- Implemented AI native services for lead scoring, client assessment evaluations, sentiment analysis and call/messaging transcription
- Implemented BigQuery Datalake structure across all departments with MCP connectors and event driven ETL processes, to streamline reporting and analysis support for executive dashboards
- Maintained A rating in employee satisfaction scores of subordinates
- Implemented Sentry logging/alerts into existing internal applications for improved visibility and customer support operations
- Designed and lead the implementation of customer, order and transaction integration into Netsuite from numerous 3rd party services (shopping carts, crm and LMS portals)
- Established automated testing and CI/CD pipelines on Node.js and PHP Laravel platform using AWS and GitHub, supporting quality and rapid delivery
- TechStack: Laravel (PHP), Next.js, Nest.js, AWS Lambda, Typescript, ECS Fargate, Redshift, API Gateway, AuroraRDS, AWS Bedrock

TIVLY

Nov 2022 - Jul 2023

Team Lead

- Developed and maintained a PHP, Laravel, and Blade SaaS product that included CRM, Call Center telephony (Twilio), and analytics features for the commercial insurance industry.
- Led implementation of DevOps and CI/CD pipelines, optimizing deployment processes and infrastructure using Docker, AWS, and Linux.
- Collaborated with stakeholders and leadership to develop product roadmaps and set execution priorities
- Led a refactor of monolithic controller methods into decoupled, reusable service classes to enhance scalability and maintainability
- Directed the optimization of inefficient queries using indexing and NewRelic slow performing query analysis
- Formed working group to create unit and integration tests for PEST / PHPUnit to reduce the release of bugs to production
- Instituted Code reviews and Bitbucket Pipeline creation to facilitate deployment flexibility and reduce dependency on resource availability in a geographically dispersed team

Blockspaces

Jun 2022 - Nov 2022

Contract / Temporary

Full stack engineer in the NEXT.js stack with React frontend. Helped establish coding practices and developed the company's consumer portal, specifically user management features. Integrated several API's and 3rd party applications including ServiceNow, Vault, and Quickbooks.

TAO CONNECT

Sep 2019 - Aug 2022

Director, Software Development

- Developed and maintained business-critical SaaS applications leveraging PHP, Laravel, Blade, Vue.js, AWS, MongoDB, Docker, Nginx, and Redis.
- Established engineering standards, Agile delivery practices, and daily Scrum leadership with technical and product stakeholders
- Launched a custom Video Conference application using Twilio Video SDK inside a PHP platform with HIPAA-compliant security, reducing costs of per participant meeting minutes from .04 to .007
- Architected and integrated a PHP/javascript chatbot for conversational search and help wizard which lead to increased user engagement and ease of navigation to educational resources
- Delivered a multi-tenant SSO user registration and sign-on experience in Laravel with OAuth and SAML2 options, and stripe payment capabilities
- Partnered, consulted and gathered requirements with over 100 university technical liaisons for the company's platform integration into University systems
- Implemented AWS Cloudwatch and alerts for improved observability of the platform state, and increased serviceability of technical support which helped reduce time to resolution on ServiceDesk tickets
- Deployed a PHP Lumen based api service to decouple a legacy, unmaintained TinCan xApi library, reducing risk and vulnerability
- Integrated Pendo into the Communication and LMS platform for better analytics and a Pendo visual tutorial for improved user experience
- Developed and configured AWS elasticsearch service to drive a responsive search experience using stemming, stop words, tokenization and relevance scoring which increased user engagement and course utilization
- Added French language support to Laravel and elasticsearch service with an AWS translation API for Canada users to meet regional language regulations
- Rolled out a dynamic reporting dashboard using a services architecture with visualizations using chart.js
- Compliance with HIPAA, GDPR, PCI, PII regulatory requirements, as well as OWAS security best practices

DIGITAL MEDIA SOLUTIONS

Jan 2018 - Aug 2019

Senior Engineer / CSM

- Writing and consuming APIs for data integrations with a Symfony-based platform, as well as custom Symfony modules leveraging TWIG and custom TWIG functions, React.
- Maintained AWS-hosted environment (autoscaling EC2 and CloudWatch alerts) ensuring platform scalability and reliability
- Provided advice on project costs, design concepts, or design changes
- Configured and maintained a full Continuous Integration process, including automated Unit Tests, Github Workflows, Travis CI, and code sniffers
- Led daily standups with the engineering team of 5
- Managed prioritization of features across multiple channels
- Collaborated with business partners to define requirements and priorities
- Implemented API services for DoNotCall registries and Blacklists
- Developed reports and dashboards with python Lambda and AWS Redshift

TRAVELOPIA

May 2014 - Mar 2018

Solutions Architect & Team Lead

- Led solutions architecture for high-availability, multi-tenant SaaS systems using PHP, Symfony, Twig, Docker, AWS, and microservices.
- Developed and enforced the adoption of coding standards, architecture best practices, and code reviews for consistent, high-quality code delivery.
- Mentored and coached 3 junior developers on OOP and PHP Symfony architecture and design
- Implemented a stand alone elastic search backend for shared content across travel groups
- Built a queue based notification system in Symfony following an event/listener pattern
- Created custom plugins / modules for Drupal to integrate with 3rd party reservation systems.
- Implemented payment processing in Symfony and Drupal, using Authorize.net following PCI, PII and GDRP regulations
- Developed Vagrant virtualization configurations used by the engineering team for developer local environment consistency
- Solicited requirements across many different business units, set expectations, managed priorities, and communicated project status
- Managed and configured Acquia Cloud (AWS reseller) hosting for multiple business groups and applications
- Integrated custom API for ERPs and Finance platforms, Hubspot, Pardot, Salesforce, and other 3rd party services

K12, INC

Feb 2010 - Feb 2012

Sr Project Manager, PMP

- Ensuring compliance with the EU Data Privacy Directive, overseeing data handling and application security for large-scale educational platforms.
- Collaborated with stakeholders and channel managers to solicit requirements and priorities

- Launched several custom applications, including an Event Management tool for hosting up to 5000 school events annually, and a Parent-Teacher communication portal on PHP driven application platforms
- Authored technical requirements for Salesforce and Marketo integrations
- Managed vendor relationships and productivity

RAYMOND JAMES FINANCIAL

May 2005 - Jun 2009

Manager - Application Administration

- Managed a distributed team of 13 Application Administrators / System Administrators
- Organized a technical working group to develop and implement MOSS2007 and upgrade from Sharepoint2003, including Reporting and Excel Services
- Oversaw the migration of Business Continuity and Application Support to a remote / redundant on-prem datacenter
- Lead the implementation of a Syndicate Deal Management application (IPO's and Secondary Offerings), which resulted in a 600% reduction in processing time and overall increase in Gross Production

AMERICA ONLINE (AOL)

Mar 1996 - Oct 2004

Senior Project Manager / Manager - Project Analysts

- Lead the department's 4 technical project analysts, including performance management, annual reviews
- Integrated advertising and reporting 3rd party technologies into AOL's proprietary content management systems
- Consistently earned the IAB's highest rating for advertising delivery and reporting
- Managed a partnership with Omniture, a leading web analytics vendor, to bolster AOL's site tracking and usage for flash, video and IAB content on AOL's systems
- Rolled out Executive Dashboards and Business Scorecards to key business units

Education

UNIVERSITY OF MARYLAND

2000 - 2004

Master of Business Administration, Organizational Management

OLD DOMINION UNIVERSITY

1988 - 1992

Bachelor of Arts, Communications

Skills

- **Testing & Quality:** TDD, Automated Testing, Unit Testing, PHPUnit
- **AI Tools:** Claude, Cursor, TensorFlow, AWS Bedrock
- **Leadership:** Distributed Teams, Mentoring/Coaching, Performance Management
- **Cloud & DevOps:** AWS, Docker, Nginx, Linux, CI/CD, DevOps, Cloudwatch, S3, Lambda, ECS / Fargate, Codepipeline, API Gateway
- **Compliance & Privacy:** EU Data Privacy Directive, HIPAA, GDPR, PCI Compliance, PII, OWASP
- **Databases:** MySQL, SQL, MongoDB, DynamoDB, Redis, AuroraRDS
- **Architecture, APIs & Processes:** Developing Architectural Standards, Microservices, Writing and Consuming APIs, Setting up Coding Standards, Code Reviews, Docker, SaaS, Platform as a Service (PaaS)
- **Process & Methodology:** Agile, SDLC, Scrum, Kanban
- **Product & SaaS Development:** Large-scale SaaS, Product Leadership
- **Frontend & Backend Frameworks:** PHP, Symfony, Laravel, Twig, Blade, JavaScript, node.js, react, next.js, nest.js, Redis, Elasticsearch
